January 2020

Please join us on Thursday, January 23 for our Bovine Education Day. Dr. Ray Reynen will be speaking about calf health with a major focus on calf scours.

Calf health is of vital importance to both dairy and beef herds. The scientific understanding of scours and the recommended treatments have changed quite a bit recently. Calf scours is a major cost to producers, and your Central Ontario Veterinary Services animal health team wants to help you reduce those losses.

With the calving season upon us, you will be able to put Dr. Reynen's advice into effect in time to increase calf survival and your bottom line this spring.
